

GetFit Mining Dock

The GetFit Mining mining dock is an innovative new feature that allows users to mine crypto with multiple NFT bands and cars. As users stake more NFTs, the mining dock will expand to allow for more bands to be mined simultaneously. This creates a strong incentive for users to share the app and help to reach milestones. The milestone chart below determines when a user can increase the number of bands or cars mined at once. With each milestone achieved, the mining dock will expand to allow for more NFTs to be mined.

Users will be able to mine with up to 30 NFTs simultaneously. This feature not only increases the user's earning potential but also keeps them motivated to continue mining as the user base expands. This allows for a steady growth in the user's earning potential and creates a sense of community as users work together to reach milestones and expand the mining dock.

Mining dock slots have a once-in-a-lifetime fee and the mining bands are interchangeable without an additional cost with the exception of the mining fees associated with the blockchains if you swap or switch your miners.

Mining Dock Slot Costs

Mining Dock Slots	Mining Dock Costs Per Slot
1	Free
2	\$10
3	\$25
4	\$30
5	\$35
6	\$40
