

Setting Your Sponsor on Your Dashboard: Ensuring Proper Credit and Earnings for Your Mentor

To ensure that your mentor, the person who introduced you to GetFit Mining, receives due credit and commissions when you mint your NFT miners, follow this straightforward process on your dashboard:

1. Access the "Add Sponsor" Field: After logging in, navigate to your dashboard. Here, you'll find a field labeled "Add Sponsor." This is where you can designate your sponsor and give them the recognition they deserve for guiding you into the GetFit Mining community.

2. Enter the Sponsor's Code or Wallet Address: Click on the "Add Sponsor" field, and a pop-out window will appear. Here, you'll enter your sponsor's referral code or wallet address. If you initially accessed the app through your sponsor's referral link, this step may already be completed for you.

3. Save and Confirm: After entering your sponsor's information, click "Save." Your Dapp wallet will then prompt you to confirm the transaction on the blockchain. As with any blockchain transaction, there will be a minor miner fee, typically a nominal amount. Be sure your wallet is funded with sufficient BNB BEP20 to cover this fee.

With your referral code and your sponsor's code or wallet address now set, you're ready to take the next step on your GetFit Mining journey. You can mint your NFT

bands, connect them to the mining dock, and embark on your fitness mining adventure with confidence, knowing that your mentor will receive the credit and commissions they deserve for helping you get started on this rewarding path.
